

Flexible and modern study carrels that can be customised to meet the specific needs of your students, with an refined appearance that is far from traditional.

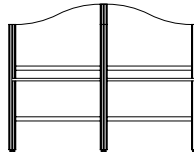

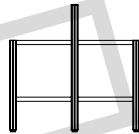

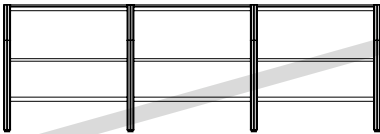

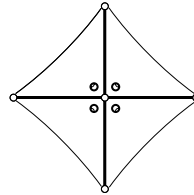

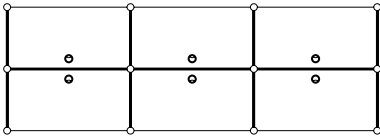

For too long have study carrels been dull and boring. The mycove from Watts aims to break that mould, by turning a once unexciting and impersonal product into the opposite; an alcove area that has style and charisma, whilst adding greater function and adaptability.

Watts mycove carrel tables offer the freedom to configure in clusters or in rows, with varying screen heights to cater for differing privacy needs.

Mycove utilises Watts 'Fitz' workstation; based on aluminium posts and interconnecting horizontal rails. The lightweight and modular system can be easily disassembled and reconfigured endlessly using rigid lock connectors.

Power can enter the carrels through powerpoles or umbilical cords (ceiling to desk or floor to desk), and be terminated by various methods to suit the application.

Ideally suited to study and library areas, mycove can add colour and excitement to previously spiritless spaces.

Carrel cluster. 1500h centre spine. 1200h privacy panels

4-way carrel pod  
curved polycarbonate panels
